

A¹ concluded

at least one reflecting mirror which is so disposed as to be substantially parallel with the surface for projection in an optical path between the original picture and the surface for projection; and

wherein the optical axis of said first projection optical system is deflected by said light deflecting means to substantially coincide with the optical axis of said second projection optical system.

11. (Amended) A projection type display apparatus according to

A²

Claim 1, further comprising a plurality of reflecting mirrors which are so disposed as to be substantially parallel with the surface for projection.

REMARKS

Claims 1-12 are pending in this application. Claims 1 and 11 have been amended. This Amendment contains clean copies of amended Claims 1 and 11. Marked up copies detailing the insertions and deletions are included on Page A1. No new matter has been added by this amendment.

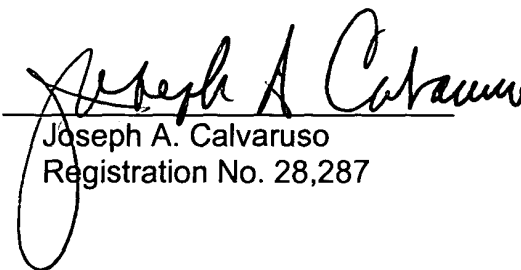

Respectfully submitted,

MORGAN & FINNEGAN, L.L.P.
